

# InSite Pro Cloud

The next generation of PyronixCloud and InSite; all together in one place

InSite Pro Cloud is our brand new platform hosted in the Cloud. It has all the legacy features of PyronixCloud, along with loads of new tools and improvements.

It's the new platform for all of your cloud settings, including panel configuration and app user pages, which allows you to remotely program your panels, diagnose, and solve issues, without any need to upload settings offline and send back to the panel.

Maximise your efficiencies across installation, maintenance and service.

InSite Pro Cloud - the interface that works on any device, on any browser, from anywhere.

## InSite ProCloud

### Full panel programming

InSite Pro Cloud enables remote, full panel programming. Everything you'd typically use the panel keypad for can now be completed in InSite Pro Cloud, including setting up and monitoring zones, outputs, expanders and communications, and even running walk tests and other commissioning tests.

The easy-to-navigate interface makes programming quick and simple – and keypad button pressing a thing of the past!

### Your browser interface on any device

By directly connecting to the control panel on any device, you can use InSite Pro Cloud to configure the control panel.

### OTA Updates

Futureproof installations and maintenance with all-new Over the Air updates. You can now update the panel's firmware remotely, while the panel is installed in a customer's premises, through InSite Pro Cloud. Provide new features quickly and simply to your users when they become available without having to travel on-site.

### Estates, Roles, and Permissions for End Users

Estates is a new feature that allows you to categorise groups of control panels for hassle-free organisation. This means if you've got a customer over more than one site, you can now group their systems together to make them easier to find. By grouping in this way, limited access and permissions can be given to the estate's manager to view statuses as required.

### Estates, Roles, and Permissions for your Employees

Estates, Roles and Permissions extends to your business as well. Fine tune the access your engineers have with their own logins and permissions down to the finest details.

Got someone in the office looking at faults to deliver customer service? Limit their access so programming changes can't be made.

Have Engineers working on a specific client's estate of panels? Assign them to that estate only and rest assured that's the only thing they can work on.

### Clone programming for speed and efficiency

Already got a zone programmed to perfection? Brilliant; click the clone zone button and all of your zone settings will be carried over into your new zone number. Name it, select the area and the level, and you're good to go!

### Provide greater service levels whilst maximising profits

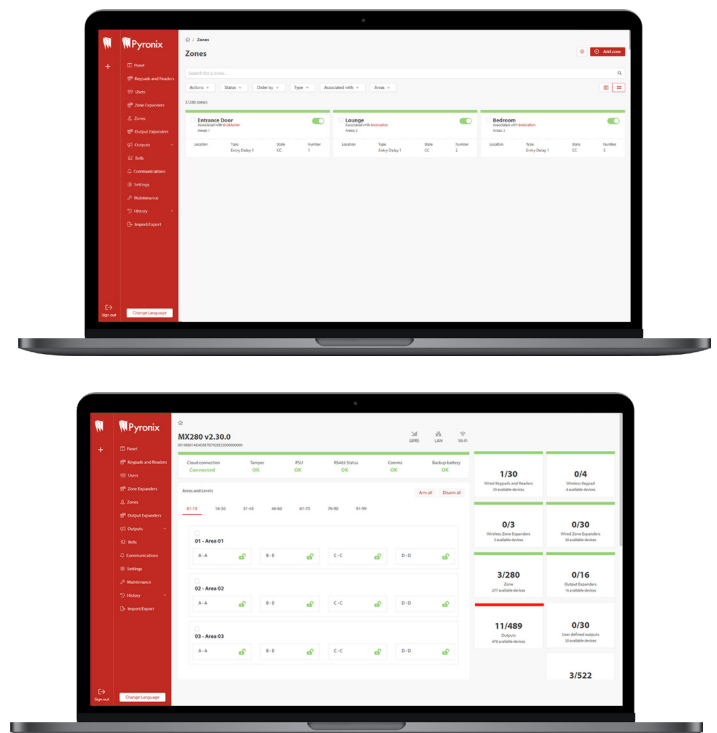

Get full understanding of all your panels in the one place. View status, see colour-coded issues surface to the top of your panels page and know what you're getting into before an engineer heads to site.

Reach resolution quicker and more efficiently, likely even before your customers know there's been an issue. Provide better customer service and put your valuable engineering resources to the best use with InSite Pro Cloud.

### Superior digital experience

Software shouldn't be clunky and difficult to use. It should be intuitive, efficient, and helpful. Insite Pro Cloud delivers on this with its installer-influenced design that gives you everything you need to supercharge productivity and reduce costs.

The next generation of panel programming technology.
