

Item Code – XT475

RJ45 Network Cable Tester with Single Head RJ45 “QC” Plug Test

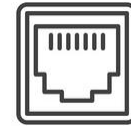

- Test status of cabling on RJ45 and RJ11 structured wiring cabling systems
- New “QC” Single Head Port specifically tests the RJ45 plug in isolation from the Cable
- Over Voltage Protection against connection to live POE circuits < 60V DC or 40V AC
- Two speed test sequence option
- **Battery not supplied for XT470 – use MN1604 Duracell or Alkaline equivalent**

Summary

This economical Network tester will locate short circuit, open circuit and wrong connection using the master and remote by the way of a flashing light sequence from one to eight. If a numbered light does not come on then the cabling has an issue. Not to be used on live networks.

The new QC Single Head test Port allows one to test just the RJ45 plug pin condition to make sure it has been correctly crimped... sometimes just the plug is at fault and so saving time checking all the cabling

Power Supply	MN1604 9Volt Battery not supplied
Sale Unit	Color box
Barcode	tba
Commodity Code	903180800
Dimension Packed	115x115x32 mm Height Width Depth
Weight Packed	0.000 tba Kg

IMPORTANT NOTE – TEST PORTS

The Single Head Test port on the extreme left marked **RJ45/QC in orange** is to test an individual RJ45 Plug.

The RJ45 PORT on the right main unit and remote are to test patch cords and Patch Panels etc.
