

# Quick Reference Guide

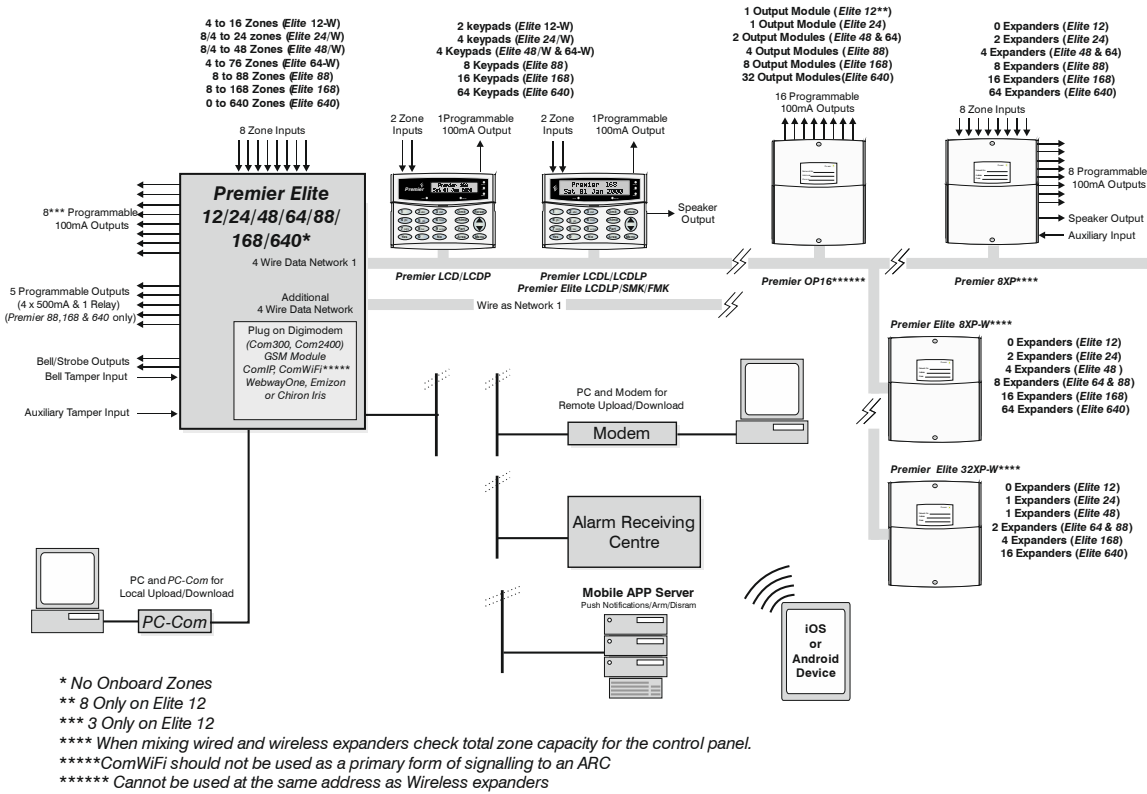

## Premier Elite Series

INS222-10

CE

**Texecom**

# Quick Start Guide

## Installation Sequence

Before attempting to install the alarm system, read this section. Once you have an overall understanding of the installation sequence, carefully work through each step.

### 1: Design the Layout

Make a rough sketch of the premises to get an idea of where the alarm detection devices, keypads, zone expanders etc. are to be located.

### 2: Mounting the Panel

The control panel should be mounted in a dry area close to an unswitched AC power source and the incoming telephone line (if using a communicator). Mount the control panel on a flat, plumb wall using at least three screws of appropriate size.

**NOTE** You must complete all wiring before connecting the battery or applying AC mains to the control panel.

**WARNING: ELECTRICITY CAN KILL BEFORE connecting the control panel ALWAYS disconnect the supply at the consumer unit. If in ANY doubt consult a qualified electrician.**

**IMPORTANT SAFETY INFORMATION. HAZARDOUS VOLTAGES INSIDE, NO USER SERVICEABLE PARTS, NO USER ACCESS.**

**NOTE** ONLY connect the mains supply to the mains terminal block, NEVER connect the mains supply directly to the PCB.

ALWAYS refer to National Wiring Regulations when conducting installation.

An appropriate and readily accessible disconnection device (e.g. an unswitched fused spur) MUST be provided as part of the installation.

The disconnection device must NOT be fitted in a flexible cord.

Where identification of the neutral in the mains supply is NOT possible a two-pole disconnection device MUST be used.

Use mains cable of adequate carrying capacity for the rated current (i.e. at least 0.75mm<sup>2</sup>).

### 3: Install the Keypads and Zone Expanders

Mount and connect the keypads, zone expanders and output modules to the control panel (see page 3).

### 4: Install the Alarm Detection Devices

Install the detection devices, PIR's, Contacts, PA Buttons etc. and connect them to the control panel (see page 4).

### 5: Install the External Sounder

Install the external sounder and connect to the control panel.

### 6: Other Wiring

Complete all other wiring including speakers, telephone line and output connections etc..

### 7: Applying Power to the Control Panel

Once steps 1 to 6 are completed, power can be applied to the control panel.

When applying power for the first time, the factory default settings must be loaded. Hold down the Load Defaults then apply power. Power should always be connected in the following order:

- Connect the red battery lead to the positive terminal of the battery and then connect the black battery lead to the negative terminal

**NOTE** The panel will only become 'live' when the AC Mains is connected or the 'Battery Kick-start' button is pressed.

- Connect the AC mains

### 8: Keypad messages

The keypad may show a mix of faults following first power up and go into alarm. If the system goes into alarm, **enter the default Engineer code 1 2 3 4**, and the alarm tone will stop. To access the Engineer Programming Menu, **enter the default Engineer code 1 2 3 4**

### 9: Select Language & Country Code

Immediately following power up you will be prompted to select the panel language and country code. The country code determines the panel defaults loaded and the operation of the system.

## 10: Confirm Devices

The "Confirm Devices" menu will appear check and make sure all installed Keypads and Expanders are showing, press  and  again to confirm.

## 11: Learn & Place Ricochet Devices

Once the panel is powered up you will be prompted to learn any Ricochet devices to the system. Devices should be learnt local to the receiver, and placed in their selected locations starting with the one closest to the receiver.

# Wiring & Addressing Network Devices

## Connecting Devices to the Network

Before connecting keypads, zone expanders and output modules, isolate ALL power from the control panel (AC Mains & Battery). Do not continue if there is still power present on the control panel.

*Connecting devices with power still present on the control panel may damage the device or control panel and invalidate any warranty.*

Keypads, expanders and output modules are all connected to the network terminals located at the bottom left hand corner of the control panel PCB, and may be connected serially (daisy chain), in parallel (star) or any combination of the two

*No more than 8 zone expanders, 8 keypads and 4 output modules can be connected to each network. The maximum number of devices that can be connected in total will depend on the control panel fitted.*

## Wiring the Network

The networks are made up of four terminals incorporating power and data. To ensure correct operation, all four terminals on the device must be connected to the corresponding terminals on the control panel, or previous device

Terminal	Description
+	+12V Supply
-	0V Supply
T	Transmit Data
R	Receive Data

Devices can be connected using 4-core cable. However, it is recommended that 6 or 8-core cable is used as the spare cores can be used to 'Double Up' on the power connections if needed.

**Stranded tinned annealed copper BS4737 7/0.2 alarm cable can be used for most installations. However, under certain conditions it may be necessary to use screened cable of the same specification.**

**PLEASE NOTE. The conductor resistance should be no greater than 8Ω per 100metres.**

**The usage of Low grade TCCA (tinned copper clad cable) can have a detrimental effect on the operation of the system and the cable distances specified in this manual.**

## Cable Distances

The maximum recommended distance for devices when using standard 7/0.2 alarm cable is:

- 250m for each branch when using the star (parallel) configuration
- When using a daisy chain (series) configuration the maximum distance will depend on the number of devices connected on the chain. Whichever method of wiring configuration is used, ensure that the voltage between the '+' and '-' terminals at each device is no lower than 10.0V when the system is running on the standby battery.
- Wireless expanders/panels should be mounted at least 50cm away from metallic surfaces.

## 12: Programming the Control Panel

Please refer to section 5 for instruction on programming the control panel.

## 13: Testing the System

Test the system thoroughly to ensure that all features and functions operate as required (see page 19 for details).

Configuration	Max. Cable Run
1. Keypad + 2 PIR's @15mA	250m
2. Expander + 2 PIR's @15mA	250m
3. Expander + 8 PIR's @15mA	100m
4. As No. 3 + 16Ω Speaker	30m

## Keypad Addressing

Each keypad must be assigned a different address using the DIL switches located on the left hand side of the PCB.

Address	DIL 1	DIL 2	DIL 3	DIL 4	
1	On or off	Off	Off	Off	
2	Off	On	Off	Off	
3	Off	Off	On	Off	
4	Off	Off	Off	On	
5 *	On	Off	Off	On	
6 *	Off	On	Off	On	
7 *	Off	Off	On	On	
8 *	On	Off	On	On	
Engineers	On	On	On	On	

*Never set two keypads on the same network to the same address.*

*When using a keypad as an Engineer's keypad, the DIL switches must all be 'On'.*

*\* 88 168 & 640 only*

## Expander Addressing

Each Expander must be assigned a different address using the DIL switches located in the centre of the PCB. The table below shows the expander addressing:

Address	DIL 1	DIL 2	DIL 3	DIL 4	
1*	On or off	Off	Off	Off	
2*	Off	On	Off	Off	
3**	Off	Off	On	Off	
4**	Off	Off	Off	On	
5***	On	Off	Off	On	
6***	Off	On	Off	On	
7***	Off	Off	On	On	
8***	On	Off	On	On	

*Never set two expanders on the same network to the same address.*

*\* 24/48/64/88/168/640*

*\*\* 48/64/88/168/640 only*

*\*\*\* 88 168 & 640 only*

# Wiring Zones

## Wiring Types

Terminal types are shown below.

12/12-W/24/24-W/48/48-W/64-W

48/88/168/Keypads & 8XP Expander

Any zones that are not being used must be linked out or programmed as 'Not Used' (see page 6).

When using End Of Line wiring, only 1 device should normally be connected to each zone.

A zone short can be programmed for 'Active' or 'Tamper' response (see page 9).

### End Of Line (EOL) All panels

Use this wiring configuration when connecting normally closed detection devices to the zone using 2-Wires. Zone wiring should be programmed as Double Pole/EOL (see page 6)

**NOTE** When using this configuration, no more than 3 detectors can be connected to each zone.

### Premier Elite 48/88/168 & 640 Double Pole

Use this wiring configuration when connecting normally closed or normally open detection devices to the zone using 4-Wires. Zone wiring should be programmed as Double Pole/EOL (see page 6)

**NOTE** When using this configuration, no more than 10 detectors can be connected to each zone.

### Triple End Of Line (TEOL)

Use this wiring configuration when connecting PIR devices with that require Anti Mask and Fault detection. Several zone wiring programming options are available for this, Triple EOL is illustrated below(see page 6).

**NOTE** When using this configuration, only 1 detector can be connected to each zone.

**NOTE** Alternative resistor values are available.

### Normally Open Or Normally Closed Circuits

This wiring configuration is normally used for key switches with a N/O or N/C contact. Zone wiring options are provided for each.

### Testing Zones

To test zones prior to commissioning, use the **View Zone Status** option in **Engineers Utilities** see page 19. You must exit engineers mode to apply any changes to zone resistance monitoring.

# Programming Guide

## Introduction

The **Premier Elite** range of control panels are all programmed using a simple menu based system. The LCD keypad information displayed for each option is question based. Simple use of the (Yes)/✓ & (No)/✗ keys allows you to accept or alter the information presented to you, whilst the ↕ key allows you to navigate through all of the main and sub menus.

The menu structure is split into 9 main headings, each with sub menus. The following sections detail all of the main menu headings and all options available within the sub menus. Where applicable any shortcut keys have been described.

Comprehensive flow diagrams and full descriptions of all available options and functions are detailed in INS176 Premier Elite Installation Manual, available on the enclosed CD or from our website.

## Default Codes

Default Engineer Code (00)	1234
Default User Code (01)	5678

0	Log Off Engineer

# Ricochet Learn

/  *	<b>Ricochet® Learn</b>
Will go to the next available wireless zone starting at 9 or Press  to search. Learning always starts from the next available zone, deleting ways starts from the highest zone learnt to the system. Use the  /  key to start the learn process for the device	
/  Enters the Delete Menu	/  To learn devices

\*Where available.

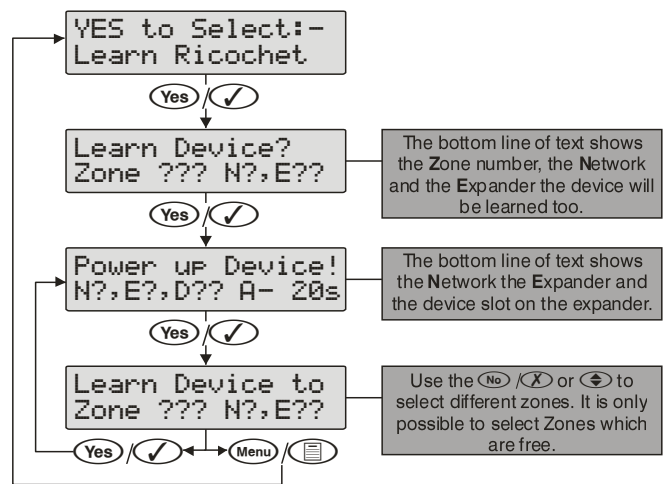

## Learning & Deleting Ricochet Devices

### Introduction

#### Learn Devices from first power up

When the "Confirm Devices" menu appears check and make sure all installed Keypads and Expanders are showing; press / and / again to confirm.

Providing the system has a *Ricochet* enabled expander installed, the following will appear. The flow diagram shows the procedure to learn devices:-

### IMPORTANT

In all cases when entering the Learn menu the next available free Zone will be chosen to learn a device too. It will not be possible to learn a device to a Zone that already has a device learned too. The number of expander's on the system will dictate which next "free" zone is chosen to learn too.

When all device slots have been used the following screen will be shown

Pressing the / key will return you to the *Ricochet*

learn menu; pressing the / key will enter the Delete devices menu.

### Commissioning

#### IMPORTANT

Once all devices are learnt they should be installed in their locations starting closest to the expander and working to furthest away. To start commission mode the receiver should be in **Tamper**, or in the case of the -W panels place the jumper on "Fit for Commission" position.

Wait for at least 15 minutes and the test all devices.

Device Type	Learn method
Premier Compact All models	Pull battery tab or Insert battery
Impaq Contact & Plus	Short learn pins and insert battery
Odyssey & OdysseyX-W	Insert batteries and move Battery Jumper to ON position
CO-W, OH-W & PA-W	Pull battery tab or Insert battery
Premier Elite QD/XT & DT	Hold down learn switch & insert battery.
SmartKey	Power on
Micro Contact	Hold down button

### Auto Zone Type & Area

When learning devices, if no editing has taken place of the control panel onboard hardwired zones, these will be switched to Not Used after the first *Ricochet* device is learned to the system; the following defaults will be used for *Ricochet* devices learned to the system.

Zone	Type	Area
001-008	Not Used	N/A
009	Entry/Exit 1	A
010	Guard Access	A
011 & above	Guard	A

### IMPORTANT

If any editing of any of the on board control panel zones is carried out **BEFORE** any *Ricochet* devices are learned too the system, the control panel zones will remain at factory defaults.

#### Access the Learn Menu using the Omit "Hot" key

From any top level engineering menu pressing the / key will take you to the *Ricochet* learn menu above.

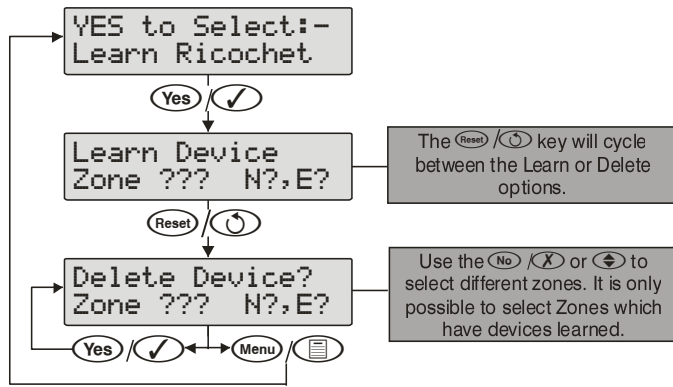

### Deleting Devices

#### Delete Devices

To delete devices from the system, access the *Ricochet* Learn menu. Any of the methods previously detailed may be used.

The / key is used to access the Delete option.

Follow the flow diagram below to delete devices from the system.

All Devices Deleted!

Pressing the (Menu) / (Omit) key will return you to the Ricochet learn menu; pressing the (Reset) / (Learn) key will enter the Learn devices menu.

### Summary of Keys used

Key	Function
(Home) / (Omit)	Use this key to access the Ricochet Learn menu from any top level engineering menu.
(Reset) / (Learn)	Use this key when in Ricochet Learn menu to delete devices, or cycle between learn and delete functions
(Menu) / (Omit)	Use this key to exit the Learn Menu.

If all devices are deleted from the system the following will be shown

## Premier Elite SmartKey™

### Introduction

Premier Elite SmartKey™ are learnt and all functionality managed through the "Setup Users" Menu.

In multiple expander systems it is now possible to choose which zones (and therefore expander) the Premier Elite SmartKey™ will use for its routing, LED and Aux functions can also be changed within the "Setup Users" menu.

Any user on the system can have a Premier Elite SmartKey™ a TAG and a code, or any combination of them.

*NOTE* Each wireless expander can support a maximum of 16 SmartKey™.

All other user programmable options can be found in INS176 Premier Elite Series Installation Manual on the enclosed CD or our website

*NOTE* Great care should be taken when using large numbers of Premier Elite SmartKey™, only one Premier Elite SmartKey™ per expander can be used by the system at any one time, and on Multiple expanders systems, or large sites, functionality should be checked in all areas of the site where the device may be used.

### Premier Elite SmartKey™ Routing

Premier Elite SmartKey™ should only be learned to the system AFTER all devices have been learned and placed in their final location. Whilst it is possible to learn at any point during the programming of the system, learning and testing the functionality of the Premier Elite SmartKey™ after all devices have been placed will ensure that the Premier Elite SmartKey™ performs as expected, and works in locations where the user would expect it too.

#### Route By

The Route By function allows you to select which Zones (and therefore expander) the Premier Elite SmartKey™ will use on the system for its routing. This should be selected BEFORE the device has been learned.

In the examples below Fig 1 shows the zones associated with Expander 1, which is a 32XP-W, and Fig 2 shows Expander 2 which is also a 32XP-W, when using 8XP-W there will obviously be less devices that the Premier Elite SmartKey™ can use.

Once a Premier Elite SmartKey™ has been learned the (Home) / (Area) key will show which zones are being used for routing. It is not possible to alter this once learned. To change the routing the Premier Elite SmartKey™ should be deleted and the process started from the beginning.

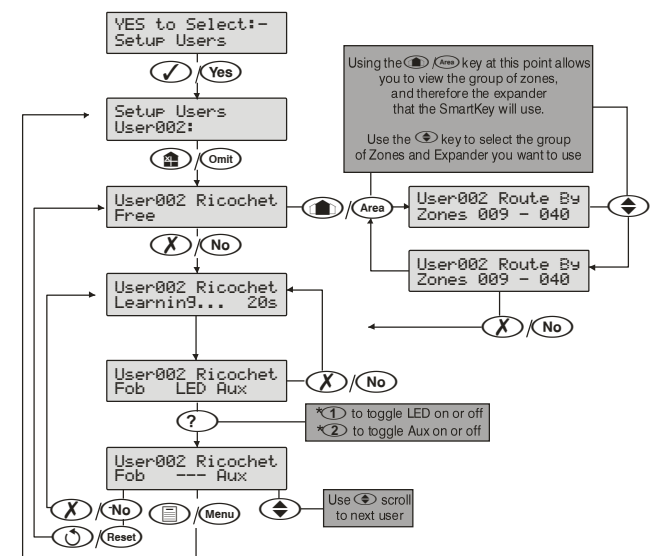

### LED & Aux Functions

Please refer to INS467 Premier 8XP-W/32-W Installation Manual for details of the LED & Aux functions.

### Deleting a Premier Elite SmartKey™

Deleting the Premier Elite SmartKey™ from the user is a similar process to learning, at the appropriate point in the menu press (X) / (No) followed by (Reset) / (Learn), the Premier Elite SmartKey™ will be removed from the User. To delete all user data see INS176.

### Learning Premier Elite SmartKey™

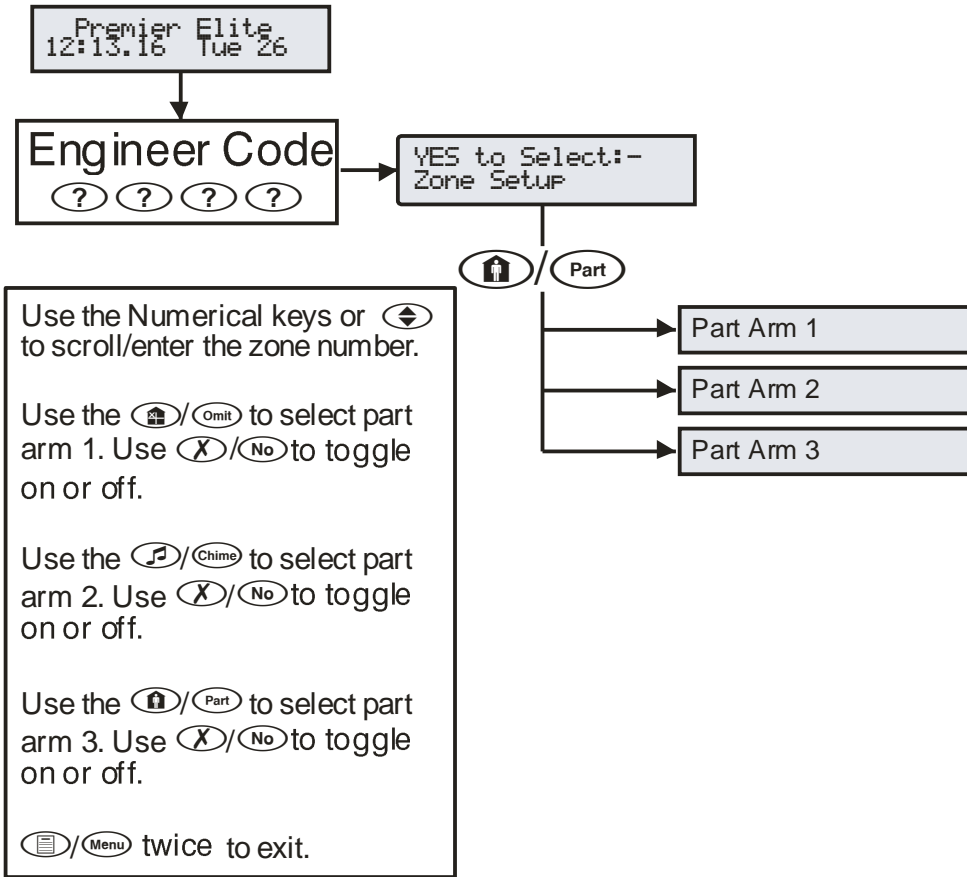

\* Please refer to INS467 "Premier Elite SmartKey" for further details on the LED & Aux functions.

**NOTE** Once the 16 slots on a XP-W are taken up, the learn process will fail and display 'No spaces left'.

way of finding out which user a Premier Elite SmartKey™ in your hand belongs to!

**NOTE** In either of the Premier Elite SmartKey™ menu displays, any Premier Elite SmartKey™ that logs onto the system will cause the menu to change to that Premier Elite SmartKey™ - a handy

## ↔ Alter Part Arms

[Home]/[Part]	Alter Part Arms		
	Press <b>0</b> - <b>9</b> to enter zone number or use <b>[Up/Down]</b> to search, <b>[Home]/[Omit]</b> , <b>[Chime]/[Chime]</b> or <b>[Home]/[Part]</b> to select Part Arms 1, 2 or 3		
	<b>[Home]/[Omit]</b> Part Arm 1	<b>[Chime]/[Chime]</b> Part Arm 2	<b>[Home]/[Part]</b> Part Arm 3
